## CORPORATE DISCLOSURE STATEMENT

*Amici curiae* are non-profit organizations. They have no corporate parents and are not owned in whole or in part by any publicly held corporation.

### ***STATEMENT OF INTEREST***<sup>1</sup>

*Amici curiae* are 37 state and regional hospital associations.<sup>2</sup> They represent thousands of hospitals and health systems across the United States. *Amici*'s members participate in the 340B drug discount program (the "340B Program"), which is essential to supporting hospitals in their service to their communities through the delivery of high-quality, efficient, and accessible health care.

Hospitals participating in the 340B Program "perform valuable services for low-income and rural communities but have to rely on limited federal funding for support." *Am. Hosp. Ass'n v. Becerra*, 596 U.S. 724, 738 (2022). Sanofi-Aventis U.S. LLC's ("Sanofi's") unlawful proposal to provide discounted pricing under the 340B Program through rebates ("rebate proposal") would increase costs for 340B hospitals and make it more difficult for them to serve their patients and communities. *Amici* therefore have a strong interest in ensuring that Sanofi cannot implement the rebate proposal and that their members can continue to access the benefit of the 340B Program as Congress intended.

## INTRODUCTION

Sanofi's rebate proposal is an unlawful attempt to self-police the 340B Program and increase costs for 340B Program providers ("covered entities"). It is fundamentally incompatible with the text and structure of the 340B statute and the purpose of the Program. *See Univ. Med. Ctr.*

---

<sup>1</sup> No party's counsel authored any part of this brief. No one, apart from the *amici curiae* and their counsel, contributed money intended to fund the brief's preparation or submission.

<sup>2</sup> A complete list of the *amici curiae* can be found in the appendix hereto.

of *S. Nev. v. Shalala*, 173 F.3d 438, 439 (D.C. Cir. 1999) (Congress was “concerned that many federally funded hospital facilities serving low-income patients were incurring high prices for drugs.”); *see also NextEra Energy Res., LLC v. FERC*, 118 F.4th 361, 371 (D.C. Cir. 2024) (“[C]ourts should prefer textually permissible readings that would advance statutory or regulatory goals over ones that would frustrate them. These are bedrock principles of statutory construction.” (internal citations omitted)). We do not address those statutory arguments here and instead refer the court to the *amici curiae* brief filed by other 340B hospital groups. *See* AHA Amicus Br., ECF No. 38; *see also* Intervenor’s Memo. Supp. Cross. Mot. Summ. Judg., ECF No. 35-1, at 18-24. If the Court agrees with those statutory arguments, the case can end because the Health Resources and Services Administration (“HRSA”) did not have the authority to approve Sanofi’s rebate model in the first place, as HRSA explained in its September 17, 2024, letter to Johnson & Johnson (“J&J”) and in its December 13, 2024, letter to Sanofi-Aventis U.S. LLC (“Sanofi”). *See* Letter from Carole Johnson, Administrator, HRSA, to Joaquin Duato, Chairman and Chief Executive Officer, Johnson & Johnson, at 2, Sep. 17, 2024, <https://www.hrsa.gov/sites/default/files/hrsa/opa/sept-17-2024-hrsa-letter-johnson-johnson.pdf> (hereinafter “J&J Letter”) (noting that requiring covered entities to purchase drugs at prices that exceed the 340B ceiling price “violates Section 340B(a)(1) of the PHS Act”); Letter from Carole Johnson, Administrator, HRSA, to Paul Hudson, Chief Executive Officer, Sanofi-Aventis U.S. LLC, at 2, Dec. 13, 2024, <https://www.hrsa.gov/sites/default/files/hrsa/opa/dec-13-2024-hrsa-letter-sanofi.pdf> (hereinafter “Sanofi Letter”) (noting that requiring covered entities to purchase drugs at prices that exceed the 340B ceiling price “violates Section 340B(a)(1) of the PHSA”). Instead, *amici* submit this brief to respond to Sanofi’s many mischaracterizations of how the 340B

Program works. Once those inaccuracies are corrected, it becomes clear that HRSA's decision to reject Sanofi's rebate proposal was not arbitrary and capricious.

In particular, Sanofi alleges that HRSA's rejection of the rebate proposal was arbitrary and capricious because the rebate proposal is similar to the replenishment models covered entities already use for 340B Program inventory management. But Sanofi fails to recognize critical differences between replenishment models and the rebate proposal that justify HRSA's rejection of the proposal. Sanofi also alleges that HRSA's rejection of the rebate proposal was arbitrary and capricious because HRSA failed to explain why it approved rebates in other circumstances for certain types of AIDS Drug Assistance Programs ("ADAPs"), a narrow category of covered entities, and not Sanofi's rebate proposal. But Sanofi ignores the detailed record explaining the unique circumstances faced by ADAPs and how they differ from other 340B covered entities.

Sanofi's failure to grapple with these meaningful distinctions is a distraction from Sanofi's true motive behind its rebate proposal—a desire to evade its obligation under the 340B statute to offer discounted pricing to covered entities and obtain access to sensitive claims data that it could later use to attack 340B hospitals. Allowing manufacturers to unilaterally implement 340B rebate models would transfer enforcement power from HRSA to drug companies, permitting them to make their own determinations about whether covered entities are entitled to 340B pricing. Providing 340B pricing through rebates would increase covered entity costs, in contradiction of the purpose of the 340B Program, and require covered entities to advance millions of dollars to cover increased drug costs while waiting for the manufacturer to decide in its sole discretion whether to grant a 340B rebate. 340B hospitals should not be forced to submit purchase data to Sanofi and hope for the best. Sanofi should be forced to follow the law, just as HRSA did when it rejected Sanofi's illegal rebate model.

For these reasons, among others, *amici* believe the Court should reject Sanofi's effort to destabilize the 340B Program for its own financial benefit and grant summary judgment for the government.

## ARGUMENT

### **I. 340B Rebate Models are Different than Virtual Inventory Replenishment Models.**

Sanofi alleges that HRSA's rejection of Sanofi's rebate proposal was arbitrary and capricious because the rebate proposal is similar to the replenishment models covered entities already use for 340B inventory management. *See* Sanofi Memo. Supp. Mot. Summ. Judg., ECF No. 27-1, at 27-28. As acknowledged in HRSA's September 17, 2024, letter to J&J, however, rebate models differ from virtual inventory replenishment models ("replenishment models") in several important ways. *See* J&J Letter at 2. That explanation of the obvious (*i.e.*, replenishment models are fundamentally different from rebate models) was more than sufficient under well-established D.C. Circuit precedent. *See, e.g., Inv. Co. Inst. v. CFTC*, 720 F.3d 370, 372-373 (D.C. Cir. 2013) ("So long as CFTC provided a reasoned explanation for its regulation, and the reviewing court can reasonably ... discern[] the agency's path, we must uphold the regulation, even if the agency's decision has less than ideal clarity.... CFTC's regulation clears this low bar." (internal quotation marks omitted)); *see also* AHA Amicus Br., ECF No. 38, at 12 n.7 (collecting cases).

Replenishment models are longstanding systems used by pharmacies to manage different drug inventories, both in the 340B Program context and outside of the 340B Program. They are fundamentally different from the rebate model that Sanofi suddenly imposed last summer. The distinctions between the replenishment inventory management system and Sanofi's rebate model payment system provide a rational and sound basis for treating the two differently, demonstrating that HRSA's rejection of the rebate proposal was far from arbitrary and capricious.

**A. Pharmacies have used virtual inventory replenishment models for decades, including for reasons unrelated to the 340B Program, and longstanding HRSA guidance confirms covered entities can use them without prior approval.**

Hospitals have relied on replenishment models to meet their inventory management and compliance obligations under the 340B statute for decades—indeed, since the very start of the 340B Program. HRSA first addressed the use of replenishment models in 1994 guidance published two years after the 340B Program’s enactment. *See* Final Notice Regarding Section 602 of the Veterans Health Care Act of 1992 Entity Guidelines, 59 Fed. Reg. 25110 (May 13, 1994). In that guidance, HRSA discussed the statutory prohibition against diversion, which forbids covered entities from reselling or otherwise transferring 340B drugs to individuals who are not covered entity patients. To comply with the prohibition, HRSA recognized that covered entities treating both 340B-eligible and ineligible patients “must develop and institute adequate safeguards to prevent [diversion] (e.g., separate purchasing accounts and dispensing records).” *Id.* at 25112; *see also* 42 U.S.C. § 256b(a)(5)(B). HRSA described the safeguards needed to prevent diversion as “tracking each discounted drug through the purchasing and dispensing process.” 59 Fed. Reg. at 25113 (noting that covered entities can develop alternative systems to demonstrate compliance “short of tracking each discounted drug through the purchasing and dispensing process,” confirming that tracking each drug through the purchasing and dispensing process is the standard system covered entities must use to demonstrate compliance).

Of course, one possible way that covered entities *could* track each drug through the process would be to maintain physically separate inventories of 340B-purchased drugs and non-340B purchased drugs, so that an entity could verify that it provided 340B drugs only to eligible patients. But that is not the only possible way. For many covered entities, physical separation is impractical. After all, maintaining two separate physical inventories of the same drugs purchased at different prices is duplicative, causes waste, increases administrative costs, and takes up considerable

physical warehousing space that covered entities may not have to store the drugs. *See* Notice Regarding Section 602 of the Veterans Health Care Act of 1992; Contract Pharmacy Services, 61 Fed. Reg. 43549, 43554 (Aug. 23, 1996) (“A separate inventory is a wasteful concept with respect to time, space and money. Further, it provides little if any additional security, as a separate inventory only speaks to what is currently on the shelf and not what should be on the shelf.”) These issues could make it difficult for covered entities to stock needed drugs, which could create patient access issues.

To avoid the challenges associated with maintaining physically separate inventories, covered entities have adopted an inventory replenishment process that uses a single drug inventory that includes drugs purchased through different accounts and is tracked virtually.

Replenishment models are not unique to the 340B Program, and pharmacies have used them to manage drug inventories in other contexts for decades. *See, e.g., Abbott Labs. v. Portland Retail Druggists Ass’n, Inc.*, 425 U.S. 1, 19-20 (1976) (confirming that a hospital pharmacy can segregate two different types of drug inventories virtually using a “recordkeeping procedure that segregates the nonexempt use from the exempt use” and is “supplemented by the hospital’s submission to its supplier of an appropriate accounting followed by the price adjustment that is indicated”); Fed. Trade Comm’n, University of Michigan Advisory Opinion Letter to Dykema Gossett (Apr. 9, 2010), <https://www.ftc.gov/sites/default/files/documents/advisory-opinions/university-michigan/100409univmichiganopinion.pdf> (approving a hospital’s use of a “GPO replenishment-based drug benefit program” under which a pharmacy would fill prescriptions using its own inventory and, later, if it is determined that certain dispenses were eligible for different pricing, the hospital would place an order through a different purchasing account to replace or replenish drugs that were previously dispensed by the pharmacy); Publication

of OIG Special Advisory Bulletin on Patient Assistance Programs for Medicare Part D Enrollees, 70 Fed. Reg. 70623, 70624 (Nov. 22, 2005) (noting that “[s]ome [Patient Assistance Programs] offer assistance directly to patients, while others replenish drugs furnished by pharmacies, clinics, hospitals, and other entities to eligible patients whose drugs are not covered by an insurance program”).

Early in the 340B Program’s history, HRSA confirmed that covered entities may use replenishment models to meet program compliance rules. 59 Fed. Reg. at 25111 (“There is no requirement for separate inventories.”); 61 Fed. Reg. at 43554 (“However, the requirement for a separate inventory of 340B drugs is unnecessary, because the covered entity is required to monitor dispensing and inventory records. In addition, these records are also subject to Department and manufacturer audits.”). And that guidance remains in force today. For instance, HRSA’s technical assistance contractor, Apexus, maintains an FAQ reiterating that covered entities do not have to use separate inventories, so long as covered entities “have fully auditable purchasing and dispensing records that document compliance with all 340B requirements.” Apexus FAQ 1343 (Nov. 10, 2014), <https://www.340bpvp.com/search#q=1343&tab=faq> (last accessed Mar. 7, 2025). When commenters asked HRSA to require pre-approval of all “safeguard systems” used by covered entities to prevent diversion, HRSA confirmed that “procedures in these areas need no prior approval.” 59 Fed. Reg. at 25111. HRSA’s consistent approval of this inventory management system from the very beginning of the 340B Program is entitled to “great weight.” *Loper Bright Enters. v. Raimondo*, 603 U.S. 369, 388 (2024); *see generally* AHA Amicus Br., ECF No. 38, at 14-16.

HRSA has acknowledged that a “large number of hospitals use replenishment models to operationalize the 340B Program.” Notice, 340B Drug Pricing Program Omnibus Guidance, 80

Fed. Reg. 52300, 52305 (Aug. 28, 2015) (withdrawn Jan. 30, 2017). And HRSA has described the replenishment model as follows:

Covered entities use replenishment models to *manage drug inventory*, including 340B drugs, which is permissible if the covered entity remains in compliance with all 340B requirements. For example, a 340B covered entity that sees many different types of patients (e.g., inpatients, 340B-eligible outpatients, and other outpatients) would tally the drugs dispensed to each type of patient and then replenish the drugs used by reordering from the appropriate accounts. Some covered entities use software, referred to as accumulators, to track drug use for each patient type. The accumulator software would indicate which drugs are available to reorder on various accounts. In this example, the covered entity counts the units or amounts received by each 340B eligible patient. Once the covered entity has dispensed enough of a certain drug to equal an available package size, the covered entity could reorder that drug at the 340B price. Once drugs are received in inventory, the drugs lose their identity as 340B drugs, inpatient GPO drugs, or outpatient non-340B/non-GPO drugs. Each 340B drug order placed should be supported by auditable records demonstrating prior receipt of that drug by a 340B-eligible patient.

*Id.* at 52308 (emphasis added).

To summarize, below are the typical steps under the 340B replenishment model:

1. Covered entity maintains separate drug purchasing accounts based on different types of pricing available (e.g., 340B account, group purchasing organization (“GPO”) account, wholesale acquisition cost (“WAC”) account).
2. Covered entity maintains a drug inventory that includes products purchased through all different accounts mixed in one physical inventory.
3. Covered entity administers/dispenses drugs to patients using drugs from mixed inventory.
4. After administering/dispensing to a patient, covered entity identifies the type of pricing the patient is eligible to receive. Covered entity uses “split-billing software” to accumulate drug utilization based on the eligibility determination. For example, administrations/dispenses to outpatients eligible to receive 340B drugs are accumulated at 340B pricing. Administrations/dispenses to inpatients accumulate at GPO pricing. Administrations/dispenses to outpatients who are ineligible for 340B pricing are accumulated at either GPO or WAC pricing, depending on the type of covered entity (the 340B statute includes a “GPO prohibition” applicable to certain types of hospitals that prevents them from purchasing “covered outpatient drugs” through a GPO. *See* 42 U.S.C. § 256b(a)(4)(L)(iii)); *see also* Apexus, GPO Prohibition Hospitals Sample Policy and Procedure Manual (DSH/PED/CAN),

<https://www.340bpvp.com/Documents/Public/340B%20Tools/sample-policy-and-procedure-manual-gpo-prohibition-hospitals.docx> (last accessed Mar. 7, 2025).

5. Upon accumulating a full package size of a particular drug, the covered entity places a replenishment order through the appropriate account based on eligible accumulations.
6. Covered entity's wholesaler ships the replenishment drugs to the covered entity, and the drugs are incorporated into the virtual inventory to replace the previously dispensed drugs.

Many hospitals using replenishment models have implemented these steps for years. The replenishment model's longstanding recognition as an approved means of 340B Program participation and compliance meaningfully distinguishes it from Sanofi's novel rebate proposal, which has nothing to do with inventory management and is instead an effort by drug companies to control whether or when to actually provide covered entities the 340B discounts they are owed under the statute.

**B. Replenishment models allow covered entities to make upfront purchases at 340B prices, whereas the rebate proposal would prohibit upfront 340B purchases.**

As HRSA noted in its September 17, 2024, letter to J&J, another key difference between replenishment models and the Sanofi rebate proposal relates to *when* covered entities are able to access 340B pricing. Under a replenishment model, covered entities can access 340B pricing right away at the point of purchase. The rebate proposal, by contrast, would require delayed access to 340B pricing in every instance. *See* J&J Letter at 2 (noting that "under a typical replenishment structure, a covered entity generally makes an initial purchase at a higher price, then subsequent, ongoing drug purchases are at the 340B price"). As outlined above, when a covered entity has accumulated enough dispenses/administrations of a drug to 340B-eligible patients, the entity can place a replenishment order for the drug through its 340B pricing account. The entity's wholesaler will then ship the drugs and invoice the entity at the 340B price, allowing the entity to access 340B

pricing immediately. Although this purchase occurs after the drug was dispensed or administered to replenish that drug supply, the covered entity's access to 340B pricing is *simultaneous* with the replenishment purchase. In contrast, under Sanofi's rebate proposal, a covered entity would not access 340B pricing through a rebate until *after* making a purchase.

Moreover, in cases where a drug is a single dose, the covered entity can place a replenishment order after one single dispense/administration without waiting for additional accumulations. This allows covered entities to place the 340B replenishment order right away after the drug use. The covered entity's access to 340B pricing is effectively simultaneous with the drug dispense/administration, whereas the rebate proposal would create an undetermined delay after the drug use until the manufacturer hopefully approves the rebate.

HRSA also noted another important distinction in its letter to J&J: "under a typical replenishment structure, a covered entity generally makes an initial purchase at a higher price, then subsequent, ongoing drug purchases are at the 340B price." *Id.* Under the rebate proposal, however, *every* purchase would be at a higher price. Sanofi misses this point in its argument and mischaracterizes how the replenishment model works.

Sanofi says the inventory replenishment model uses rebates with "covered entities making initial WAC purchases and receiving 340B-priced drugs as a rebate in kind." Memo. Supp. Mot. Summ. Judg., ECF No. 27-1, at 27-28. But this is not how the Program functions. Often, hospitals that use a replenishment model rarely purchase at WAC prices and instead primarily purchase at 340B prices, except for the initial purchase.

For example, for hospitals subject to the prohibition on using a GPO to purchase "covered outpatient drugs,"<sup>3</sup> HRSA has advised that when they use a replenishment model, they should first

---

<sup>3</sup> See 42 U.S.C. § 256b(a)(4)(L)(iii).

“purchase using a non-GPO account and only replenish with 340B drugs once 340B patient eligibility is confirmed and can be documented through auditable records.” HRSA 340B Drug Pricing Program Notice, Release No. 2013-1, Statutory Prohibition on Group Purchasing Organization Participation (Feb. 7, 2013), <https://www.hrsa.gov/sites/default/files/hrsa/opa/prohibition-gpo-participation-02-07-13.pdf> (last accessed Mar. 7, 2025). This means when a hospital subject to the GPO prohibition first orders drug inventory, it must do so at non-340B, non-GPO pricing (often WAC prices). The next purchase, however, is critical—and exactly where Sanofi loses the thread. Once the hospital maintains a WAC inventory and begins accumulating dispenses/administrations, the hospital may then place replenishment orders at 340B or GPO prices upon achieving sufficient accumulations. In many cases, particularly when most or nearly all patients in a hospital location are 340B-eligible, the hospital will almost exclusively accumulate dispenses at 340B prices and will generally place replenishment orders at 340B prices. In this scenario, the hospital will nearly always get access to 340B pricing immediately after initially purchasing the inventory at WAC pricing. In contrast, Sanofi’s rebate proposal would require the hospital to *always* purchase drugs at WAC prices. As such, despite Sanofi’s best efforts to equate the replenishment model with the rebate proposal, “one of these things is not like the other[.]” *Karczewski v. DCH Mission Valley LLC*, 862 F.3d 1006, 1018–19 (9th Cir. 2017) (citing *SESAME STREET, One of These Things (Is Not Like the Others)*, on *SESAME STREET BOOK & RECORD* (Columbia Records 1970)).

Lastly, the replenishment model is different than the rebate proposal because covered entities have certainty under the replenishment model that when they place an order at 340B pricing, they will be pay the 340B price, whereas the rebate proposal affords no such certainty. The manufacturer plays no role in validating a 340B purchase under the replenishment model,

which gives a covered entity confidence that the purchase will generate 340B savings. This certainty permits covered entities to make decisions on their operations, patient care, and use of 340B savings. For example, a covered entity may be able to provide a discounted price to a low-income patient, knowing that the entity was able to acquire the drug at a discounted price. Under the rebate proposal, however, the entity would not know whether the manufacturer will ultimately approve the rebate and, therefore, may not know whether providing a discounted drug price to the patient would be feasible.

**II. Even if the Secretary Has Authority to Approve a Rebate Model, HRSA’s ADAP Guidance Does Not Make its Rejection of the Rebate Proposal Arbitrary and Capricious.**

As outlined by intervenors, *amici* agree that the proposed rebate model is unlawful *per se* and that HRSA lacks authority to approve any rebate plan. *See* Memo. Supp. Cross. Mot. Summ. Judg., ECF No. 35-1, at 18-24. We do not address those arguments here and instead refer the court to the brief filed by the intervenors. But, in the event the court finds HRSA does have authority to approve a rebate plan, *amici* submit that HRSA’s denial of Sanofi’s rebate plan (even though HRSA permitted rebates in the special circumstances of the ADAP programs) was lawful, and certainly not arbitrary and capricious. That HRSA permitted rebates in the special circumstances of the ADAP programs does not change that conclusion.

In 1998, HRSA issued guidance recognizing a 340B rebate option as an alternative method of accessing 340B prices for one specific type of covered entity: ADAPs, due to the unique structure of these covered entities. *See* Final Notice Regarding Section 602 of the Veterans Health Care Act of 1992— Rebate Option, 63 Fed. Reg. 35239 (June 29, 1998). ADAPs provide drugs to low-income individuals living with HIV/AIDS. *See* HRSA, Part B: AIDS Drug Assistance Program (ADAP), <https://ryanwhite.hrsa.gov/about/parts-and-initiatives/part-b-adap>. Sanofi emphasizes that HRSA failed to explain why it permitted rebates for ADAPs but did not permit

Sanofi’s proposal. Memo. Supp. Mot. Summ. Judg., ECF No. 27-1, at 27. However, in its notice recognizing the rebate model for ADAPs, HRSA explained in detail why it recognized the model for ADAPs and not for other covered entities. Moreover, the rebate model proposed by Sanofi differs from the ADAP model recognized by HRSA in meaningful ways, particularly given that HRSA envisioned that rebates would be an *option* for ADAPs, not a mechanism *required* by manufacturers.

**A. HRSA explained why the ADAP rebate model was needed for ADAPs and not for other covered entities.**

There is an extensive record explaining why HRSA recognized a limited rebate model option for ADAPs in 1998 and why HRSA chose not to extend the rebate option to other covered entities. When finalizing the rebate option, HRSA said it developed the option “in response to a clear need by certain State ADAPs which are unable to access [340B] pricing through the direct discount option.” 63 Fed. Reg. at 35240. HRSA acknowledged that the rebate option was only available to ADAPs, not to other covered entities, because ADAPs operate differently than other covered entities. Specifically, HRSA said the rebate option would be accessed by a subset of ADAPs, those that use “decentralized drug purchasing.” *Id.* In response to HRSA’s proposal to allow a limited rebate model for ADAPs, commenters explained that ADAPs are “more like State-run pharmaceutical benefit programs” and that their support of HRSA’s proposal to recognize rebates for ADAPs “would be different if HRSA proposed a rebate program for all covered entities.” 63 Fed. Reg. at 35241. The commenters went on to say, “[a]ccordingly, we urge that the rebate mechanism be an option only for meeting the unique needs of the State ADAP programs and that HRSA not consider any further expansion to other categories of entities.” *Id.* HRSA agreed with the comments and confirmed the notice “only recognizes a rebate option for the State

AIDS Drug Assistance Programs that receive assistance under Title XXVI of the PHS Act.” 63 Fed. Reg. at 35241-42.

When proposing the ADAP rebate model option, HRSA explained:

Initially, HRSA guidance for the section 340B program described only a discount process. Covered entities generally preferred a discount system, because they could negotiate lower prices and needed less initial outlay of drug purchasing money. Although the discount system is functioning successfully for most covered entities, most ADAPs have drug purchasing systems that have prevented their participation in the section 340B discount program. The use of a rebate option (in addition to the discount mechanism) should allow these groups to access section 340B pricing.

Notice Regarding Section 602 of the Veterans Health Care Act of 1992 Rebate Option, 62 Fed. Reg. 45823, 45824 (Aug. 29, 1997).

The Department of Health and Human Services Office of the Inspector General (“HHS OIG”) has also addressed the unique needs of certain ADAPs that could benefit from the rebate option, explaining that ADAPs use two purchasing mechanisms: the direct purchase mechanism and the rebate mechanism. *See* HHS OIG, OEI-05-99-00610, AIDS Drug Assistance Program Cost Containment Strategies (Sep. 2000), at 9, <https://oig.hhs.gov/documents/evaluation/2127/OEI-05-99-00610-Complete%20Report.pdf> (hereinafter “OIG Report”). Under the direct purchase mechanism, the ADAP purchases drugs through a central purchaser or other entities, such as a state pharmacy, purchasing agent, or public agency/hospital. *Id.* Under the rebate mechanism, ADAPs that do not have a central purchaser contract with a pharmacy network or pharmacy benefits management company to purchase drugs for the ADAP, and the ADAP reimburses the purchasing entity. *Id.* The OIG explained that initially, only ADAPs using the direct purchase mechanism could access 340B pricing, and many ADAPs using a rebate mechanism were unable to participate in 340B until HRSA’s guidance recognizing a 340B rebate option for ADAPs. *Id.* at 10. The OIG described the 340B Program as “intended to provide an up-front discount off the purchase price of pharmaceuticals,” and noted that HRSA’s “340B rebate option was designed to

specifically accommodate those ADAPs with a reimbursement structure.” *Id.* at 22. The OIG confirmed: “Only ADAPs are eligible to participate in this option.” *Id.*

As this extensive record shows, HRSA’s decision to permit a rebate option for ADAPs but not for other covered entities is hardly arbitrary or capricious. To be sure, “[w]here an agency applies different standards to similarly situated entities and fails to support this disparate treatment with a reasoned explanation and substantial evidence in the record, its action is arbitrary and capricious and cannot be upheld.” *Burlington N. & Santa Fe Ry. Co. v. Surface Transp. Bd.*, 403 F.3d 771, 777 (D.C. Cir. 2005). But a “necessary component of any claim that an agency acted arbitrarily and capriciously in this respect is that the differently treated entities are, in fact, ‘similarly situated.’” *Vanda Pharms., Inc. v. Food & Drug Admin.*, 2023 WL 6035663, at \*14 (D.D.C. Aug. 2, 2023) (citing *Anna Jacques Hosp. v. Sebelius*, 583 F.3d 1, 7 (D.C. Cir. 2009)).

Here, HRSA has provided a detailed and reasoned explanation for why ADAPs are fundamentally different from other 340B covered entities. As documented in the record, many ADAPs operate through unique purchasing systems that limit their ability to participate in the 340B Program through a discount model. And HRSA’s approval of the ADAP rebate option was designed specifically to accommodate ADAPs that employ a reimbursement structure, rather than a direct purchasing structure. These ADAPs’ unique needs more than justify what might otherwise be characterized as any inconsistency in approach. *See, e.g., Health Alliance Hospitals, Inc. v. Burwell*, 130 F. Supp. 3d 277, 302 (D.D.C. 2015) (agency action not arbitrary and capricious where activities to which agency applied supposedly disparate rules were “not similarly situated” and agency had “adequately explained the reasons for the disparate treatment”); *TransCanada Pipelines Ltd. v. FERC*, 878 F.2d 401, 414-15 (D.C. Cir. 1989) (noting that different treatment “that is based on relevant, significant facts which are explained would not be arbitrary and

capricious”); *see also Gilbert v. NLRB*, 56 F.3d 1438, 1445 (D.C. Cir. 1995) (“[W]here the circumstances of the prior cases are sufficiently different from those of the case before the court, an agency is justified in declining to follow them, and the court may accept even a laconic explanation as an ample articulation of its reasoning.” (quotation marks omitted)).

**B. Sanofi’s rebate proposal differs from the ADAP rebate model in ways that would prevent it from meeting HRSA’s ADAP rebate model requirements.**

*1. The ADAP rebate model is optional for covered entities, whereas the Sanofi rebate proposal is mandatory.*

In recognizing the ADAP rebate model, HRSA indicated that manufacturers could meet their statutory obligation to offer 340B prices to ADAPs by providing rebates, but HRSA did not authorize manufactures to *mandate* the use of rebates as the only mechanism to make 340B pricing available. Rather, HRSA allowed ADAPs to *choose* whether to access 340B prices via rebates and, in those cases, mandated that manufacturers recognize an ADAP’s request for rebates.

For example, HRSA referred to the ADAP 340B model as the “State ADAP Section 340B Rebate *Option*.” 63 Fed. Reg. at 35242 (emphasis added). Commenters asked HRSA to clarify that the rebate option is an “alternate to” an upfront discount mechanism and that “the *choice* of a single mechanism should be made by each State ADAP.” 63 Fed. Reg. at 35240 (emphasis added). In response, HRSA confirmed that the ADAP rebate option is an “alternate method of accessing 340B pricing” intended for those state ADAPs unable to access upfront discounts, and in cases where a state ADAP uses both a direct purchase mechanism and a rebate mechanism, some ADAPs “may *elect* to access pricing through a rebate mechanism while other ADAP components may develop systems to access a direct discount.” *Id.* (emphasis added). HRSA also confirmed that manufacturers and ADAPs could enter into contractual agreements to address rebate terms and “mutually acceptable solutions.” *Id.* at 35241. HRSA’s responses demonstrate that the use of the

rebate option was a *choice* for ADAPs to make and that HRSA's guidance did not allow manufacturers to *mandate* the use of a 340B rebate model.

HRSA also confirmed that if an ADAP requests a 340B rebate, the manufacturer must provide the rebate, revealing the mandatory nature of the rebate model *as it relates to manufacturers*, not covered entities. *Id.* at 35240-41. HRSA acknowledged that some manufacturers may have previously offered 340B rebates to ADAPs through voluntary rebate agreements, whereas HRSA clarified in the rebate option guidance that the 340B statute *required* manufacturers to offer rebates upon request from an ADAP. The OIG confirmed the mandatory nature of the rebate option with respect to manufacturers, not covered entities, characterizing HRSA's 1998 guidance as allowing states that *select* the rebate option to access the 340B price and "lessening the burden on them to negotiate with individual manufacturer's [sic] for voluntary rebates." OIG Report at 10.

2. *The ADAP rebate option prohibits manufacturers from requiring assurances of compliance, whereas the Sanofi rebate proposal requires covered entities to demonstrate eligibility.*

When finalizing the ADAP rebate option, HRSA reminded manufacturers that prior HRSA guidance regarding manufacturer contract requirements also applies to the ADAP rebate option and that "a manufacturer may not condition a rebate contract or agreement upon an entities' [sic] compliance with the provisions of section 340B." 63 Fed. Reg. at 35239; *see also* AHA Amicus Br., ECF No. 38 at 14 & n.9. In the event that manufacturers had designed voluntary rebate agreements "predicated" on 340B compliance, HRSA instructed them to revise the agreements for purposes of 340B rebate agreements to remove those elements. 63 Fed. Reg. at 35239-40.

In contrast, Sanofi would not honor a rebate request under its proposal without validating a claim as 340B-eligible based on a review of information submitted by the covered entity. *See* Sanofi Memo. Supp. Mot. Summ. Judg., ECF No. 27-1, at 14; *see also* Sanofi Letter to Covered

Entities, Nov. 22, 2024 (updated Dec. 16, 2024), at 3-5, [https://beaconchannelmanagement.com/Sanofi%20Credit%20Model%20Policy%20Letter%20\(12.16.2024\).pdf](https://beaconchannelmanagement.com/Sanofi%20Credit%20Model%20Policy%20Letter%20(12.16.2024).pdf) (last accessed March 23, 2025) (hereinafter “Sanofi Notice”). Specifically, Sanofi will validate that a drug was dispensed or administered at an eligible location and that the drug was dispensed to an eligible patient. *See id.* at 4.

3. *The ADAP rebate option requires standard business practices, and the requirements under the Sanofi rebate proposal would not meet these standards.*

HRSA also recognized that “standard business practices” should be used by ADAPs and manufacturers. 63 Fed. Reg. at 35242 (recognizing that standard business practices “are appropriate for the development of rebate contracts and agreements between State ADAPs and manufacturers); *see also id.* at 35240 (“Standard business practices should be utilized by State ADAPs and manufacturers.”). However, Sanofi’s proposed rebate model would not satisfy HRSA’s standard business practices requirement.

HRSA noted that manufacturers can use the Medicaid rebate program as a model for development of ADAP rebate agreements and encouraged manufacturers to use the Medicaid claim form as a model because it could be considered a “standard business practice model.” *Id.* at 35240. Importantly, HRSA recognized: “Pharmacy specific data (prescription number, date of reimbursement, and similar data elements) are not reported on the initial Medicaid utilization submission and are not considered the standard for initial claim submission.” 63 Fed. Reg. at 35241. Because Sanofi’s rebate proposal would require covered entities to submit pharmacy specific data elements such as these, the proposal would not meet HRSA’s requirement for ADAP 340B rebate models to be standard business practices. *See* Sanofi Notice at 15-16. Similarly, HRSA noted that allowing rebate requests for up to one year would be “within the range of standard business practices.” 63 Fed. Reg. at 35241. In contrast, the Sanofi rebate proposal would

require covered entities to submit rebate requests within 30 days of a dispense, which would not be a standard business practice. Sanofi Notice at 3; *see also* AHA Amicus Br., ECF No. 38, at 14 n.9.

Given the numerous differences between the rebate proposal and the ADAP rebate option, the fact that HRSA permitted rebates in narrow cases for certain types of ADAPs does not mean that HRSA's rejection of Sanofi's rebate proposal was arbitrary and capricious.

### **CONCLUSION**

Sanofi's rebate proposal would increase costs for 340B hospitals and make it more difficult for them to serve their patients and communities. For the reasons above and those stated by Defendants, HRSA was correct to reject Sanofi's unlawful rebate proposal, and the Court should deny Sanofi's motion for summary judgment.
